## Customer Information

### Vanity Tops

- We are not responsible for reconnecting the plumbing, Quality Sales Co. employees are not certified plumbers. The customer must arrange for their own plumbing.
- We will measure for the vanity top and, or job after the cabinets have been secured to the wall.
- For a coved backsplash vanity top the cabinet depth (from front to back) needs to be 21" to 21 1/4". All other tops will be flat with separate splashes. Example: Angle tops, odd shapes or sizes.
- For vanity tops with a coved backsplash the finished measurement will be:
  - \* Length – Cabinet length plus 3/4"-1" overhang
  - \* Depth – 22"
  - \* Height – (on coved backsplash) – 4 3/4"
- Once the silicone caulking has been applied, it needs to dry for 24 hours, without water or anything touching it, to properly cure.
- If the marble or vanity tops are to be picked up by the customer, the customer needs to have adequate room in the vehicle. (We prefer a clean, open bed of a truck) The customer also needs to supply a rack to transport larger pieces of marble. ( A rack can be 2x4's cut down to 72" or plywood cut down to 72")
- To clean cultured marble please refer to Quality Sales Co. Care Instructions.
